

THE NUCLEUS

The nucleus is the brain of the cell. It controls everything that happens inside the cell.

The nucleus is found in both plant and animal cells.

A human brain is like the nucleus. It controls everything that happens in the human body.

The Golgi Body

The Golgi Body manufactures lysosomes and vesicles. It also stores the chemicals need to make the lysosomes and vesicles.

The Golgi Body is found in both plant and animal cells.

A storage shed is similar to the Golgi Body. It stores necessary items until they are needed.

The Cell Wall

The cell wall provides support to a plant cell. It also protects the plant cell while helping it to keep its shape.

The cell wall is found only in a plant cell.

The cell wall is like a brick wall. It is firm and supports the building.
