

Writing a Children's Book

Your assignment is to write a children's book about cells. You know all about cells from your trading cards assignment. Use what you have learned to write your book.

Your book must include:

- A cover (your cover needs a title and an illustration).
- A title page.
- The story.
 - The story can be non-fiction (you are explaining the cell).
 - You can explain the cell and have a page explaining the organelle.
 - It can be a "travel guide," explaining what you could see if you travelled through a cell.
 - The story can be fiction.
 - The organelle can be the storyteller.
 - Someone could get stuck in a cell and, while trying to get out, talk to the organelles to find out what they do.
- There must be an illustration on each page.
- You must include *at least* two different pop-ups.

Each page of your book will be a sheet of paper folded in half. Each half is a page. When you are done, you may staple the book together. You may also choose to punch holes along the edge and tie yarn to hold your book together.

Remember: Your audience is younger children. Make sure they will understand the book!
